If more than one search is submitted, please prioritize searches in order of need.
Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc. if known. Please attach a copy of the cover sheet, pertinent claims, and abstract.
Title of Invention: 08/487283.
Inventors (please provide full names):
Earliest Priority Filing Date:
*For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the
appropriate serial number.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DB seq length: 0'DB seq length: 21

However, unlike the claimed peptides of the invention, this peptide exhibited no cell adhesion. The invention relates to novel fibrinogen C-terminal peptides, peptide-09 (AAY52600), peptide-70 (AAY52639) and peptide-71 (AAY52694). These claimed peptides have cell adhesive effects, with peptide-09 being the most potent for cell binding, and peptide-71 being the next most potent. Peptide-71 was also found to have cell proliferative effects. The peptides can be used to promote healing of a wound in a patient. They can also, be used for diseases characterised by the absence of a

                                                             The cDNA sequence of the complement C5 gene transcript predicts a secreted pro-C5 precursor of 1676 amino acids (AAR77604). C5 is a beta-globulin heterodimer thought to play a role in the pathogenesis of glomerulonephritis (GN). Cleavage of the C5 alpha-chain by a convertase enzyme generates anaphylatoxic C5a. Monoclonal and humanised recombinant antibodies that recognise the alpha-chain KSSKC epitope (AAR77605) block C5a generation, thereby reducing glomerular inflammation and kidney dysfunction associated with GN.

cellular product, e.g., diabetes mellitus type I, haemophilia A (factor VIII deficiency), and haemophilia B (factor IX deficiency). They can also be used for the growth and transport of cells in cell culturing systems, the separation of different types of cells from mixed cell cultures, and the transplantation of cells into tissues or cell cultures, and the transplantation of cells into tissues or cell cultures, prosthetic devices or collagen sheets. The peptides can also be used as tools for performing analysis of other physiological systems, and for further research and development, for example, to identify and isolate cell receptors. The peptides can also be used in diagnosis, e.g., of blood coagulation disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic peptides (AAR67858-R67865) were individually assayed as test substances to ascertain their effect on the formation of the bloodclotting factor VII/tissue factor multi-protein complex. Of the peptides tested, the most inhibition was obtained with cyclic peptides representing the ring structures present in the FVII growth factor domains (i.e. AAR67861, AAR67864). Peptide AAR67865, a linear peptide corresp. to residues 136-146 from a region close to the site of cleavage which activates FVII also had good inhibitory

                                                                                                                                                                                                                          This peptide fragment is useful for preparing pharmaceutical compositions for prevention or inhibition of Factor-VII binding to tissue factor. It is useful for treating or preventing blood clotting disorders in humans and animals, e.g. thrombosis, angina, cerebrovascular disease or pulmonary embolism.
        Factor VII peptide analogue

                                                                                                                                                                                                                                                                                                                                                                     ö
                                                      Synthetic peptides (AAR67858-R67865) were individually assayed as test substances to ascertain their effect on the formation of the bloodclotting factor VII/tissue factor multi-protein complex. Of the peptides tested, the most inhibition was obtained with cyclic peptides representing the ring structures present in the FVII growth factor domains (i.e. AAR67861, AAR67861, and AAR67863). Peptide AAR67863, a linear peptide corresp. to residues 136-146 from a region close to the site of cleavage which activates FVII also had good inhibitory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This peptide fragment is useful for preparing pharmaceutical compositions for prevention or inhibition of Factor-VII binding to tissue factor. It is useful for treating or preventing blood clotting disorders in humans and animals, e.g. thrombosis, angina, cerebrovascular disease or pulmonary embolism.
                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                     ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Factor VII-derived peptide compounds - useful for preventing/inhibiting binding of tissue factor to factor VII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Factor-VII; blood-clotting factor; thrombosis; angina; cerebrovascular disease; pulmonary embolism; heart disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   And residues 8562-R875 of murine GP88 (see AAM85474). GP88 is an acid residues 8562-R875 of murine GP88 (see AAM85474). GP88 is an acid residues 8562-R875 of murine GP88 (see AAM85474). GP88 is an atightly regulated manner in normal cells, is overexpressed and unregulated in highly tumorigenic cells derived from normal cells, and which acts as a stringently required growth stimulator for the tumorigenic cells. S14R was used to raise neutralising antibodies to GP88 is such as anti-GP88 antibodies used to treat diseases associated with increased expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GP88, particularly cancer but also viral infections. Anti-GP88 antibodies can also be used as diagnostic reagents and to deliver toxins or other compounds to GP88-expressing cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This is the amino acid sequence of peptide S14R, comprising amino

                                                                                                                                                                                                                                                                                                                                                                                                                       especially, breast, lung, ovarian, cervical, colorectal, prostate or pancreatic cancers, malignant melanoma, leukaemias, lymphomas, or biliary tract carcinomas. They are useful for generating telomerase T lymphocytes capable of recognising and destroying tumour cells in a mammal, comprising culturing T lymphocytes obtained from the mammal with the peptides. Telomerase protein is expressed only by tumour cells, hence, other body cells are not targeted or destroyed by telomerase specific T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a telomerase peptide of the invention, be used in a method for the treatment or prophylaxis of cancer sequences are useful in the treatment or prophylaxis of cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       conjugated peptide comprises a first T cell specific binding peptide (SBP), and a second T cell SBP, the first and second peptides being derived from different molecules and covalently linked together, where the first T cell SBP binds to a specific class or subclass of T cells and the second T cell SBP is an antigenic peptide capable of eliciting TH1 associated antibodies and having sequence identity with the p17 gag protein of HIV where the peptide has a sequence originating with an amino acid residue chosen from residues 75 to 82 and ending with an anino acid residue chosen from residues 106 to 111 of p17 gag protein of HIV. The peptides can induce a TH1, TH2 or mixed TH1/TH2 directed immune response against HIV and HIV infected cells. They can be used for treating or preventing HIV infection and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents an HIV pl7 gag protein antigenic peptide species specific sequence from the present invention. The present invention describes a conjugated peptide which is capable of eliciting a TH1 response when administered to a human. The

peptide having a sequence derived from HIVp17gag protein

```
The present sequence represents an HIV p17 gag protein antigenic peptide species specific sequence from the present invention. The peptide species specific sequence from the present invention describes a conjugated peptide which is capable of eliciting a HII response when administered to a human. The conjugated peptide comprises a first T cell specific binding peptide (SBP), and a second T cell SBP, the first and second peptides being derived from different molecules and covalently linked together, where the first T cell SBP binds to a specific class or subclass of T cells the second T cell SBP is an antigenic peptide capable of eliciting THI associated antibodies and having sequence identity with the p17 gag protein of HIV where the peptide has a sequence originating with an amino acid residue chosen from residues 106 to 111 of p17 gag protein of HIV the peptides can induce a THI, TH2 or mixed TH17H2 directed immune resonce anainer and the second are induced a THI, TH2 or mixed TH17H2 directed immune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                 New conjugated peptide(s) for treating or preventing HIV infection comprise first and second T cell specific peptide(s) with one peptide having a sequence derived from HIVp17gag protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HIV; human immunodeficiency virus; antigen; conjugated peptide; pl7 gag protein; T cell specific binding peptide; TH1; TH2; AIDS; immune response; HGP-30.
                                                                                                                                                                                                                                                                                                                                                                                                                                               response against HIV and HIV infected cells. They can be used for treating or preventing HIV infection and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó

```
The present sequence represents an HIV p17 gag protein antigenic peptide species specific sequence from the present invention. The present invention describes a conjugated peptide which is capable of eliciting a FHI response when administered to a human. The conjugated peptide comprises a first T cell specific binding peptide (SBP), and a second T cell SBP, the first and second peptides being derived from different molecules and covalently linked together, where the first T cell SBP binds to a specific class or subclass of T cells and the second T cell SBP is an antigenic peptide capable of eliciting and the second T cell SBP is an antigenic peptide capable of eliciting repreted antibodies and having sequence identity with the p17 gag protein of HIV where the peptide has a sequence originating with an amino acid residue chosen from residues 75 to 82 and ending with an amino acid residue chosen from residues 106 to 111 of p17 gag protein of HIV. The peptides can induce a THI, TH2 or mixed THI/TH2 directed immune response against HIV and HIV infected cells. They can be used for treating or preventing HIV infection and AIDS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New conjugated peptide(s) for treating or preventing HIV infection comprise first and second T cell specific peptide(s) with one peptide having a sequence derived from HIVpl7gag protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptide species specific sequence from the present invention.                                                                                                                                                                                                                                                                                                                                                            02-MAR-1999;
23-MAR-1999;
28-MAY-1999;
The present invention describes isolated nucleic acid molecules (I) encoding an attB1, attB2, attP1, attP2, attL1, attL2, attR1, and attR2 nucleotide sequence. Also described are: (I) an isolated nucleic acid molecule (II) comprising one or more att recombination sites comprising at least one mutation in its core region that increases the specificity of interaction between the recombination site and a second att recombination site; and (2) an isolated nucleic acid molecule (III) comprising one or more mutated att recombination sites comprising at least one mutation in its core region that enhances the efficiency of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Bacteriophage lambda; att; recombination site; attB; attP; attL; mutant; recombinational cloning; entry vector; destination vector; gene product targeting; fusion tag cleavage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the first T cell SBP binds to a specific class or subclass of T cells and the second T cell SBP is an antigenic peptide capable of eliciting TH1 associated antibodies and having sequence identity with the p17 gag protein of HIV where the peptide has a sequence originating with an amino acid residue chosen from residues 75 to 82 and ending with an amino acid residue chosen from residues 106 to 111 of p17 gag protein of HIV. The peptides can induce a TH1, TH2 or mixed TH1/TH2 directed immune response against HIV and HIV infected cells. They can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cohjugated (SBP), and

(I), (II), (III), primers, vectors and methods from the present invention are used for the recombinational cloning of nucleic acid molecules. They can be used for changing vectors, targeting gene products to intracellular locations, cleaving fusion tags from desired proteins, operably linking nucleic acid molecules of interest to regulatory genetic sequences, constructing genes for fusion proteins, changing copy number, changing replicons, cloning into phages and cloning, (I), (II), (III), host cells and vectors can be used in the production of polypeptides and antibodies. The present sequence is used in the exemplification of the present invention.
                                             useful in the treatment of blood coagulation disorders, e.g. thrombosis, etc. It is also useful in the study of phosphatidylserine which plays an important role in the cell membrane, artificial
                                                                                         The sequence is that of a peptide recognising phosphatidyl-serine and ethanolamine. It inhibits the activity of blood coagulation factor VIII, and does not inhibit the activity of factor V. It is
                                                                                                                                                                                           New physiologically active peptide recognising phosphatidyl-serine and-ethanolamine - inhibits activity of blood coagulation factor VJ but not factor V, used for treating thrombosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                Synthetic.

Patent No. 6093400
GENERAL INFORMATION:
APPLICANT: DANIEL H. ZIMMERMAN, PREM S. SARIN
TITLE OF INVENTION: Modified HGP-30 Peptides, Conjugates,
TITLE OF INVENTION: Compositions and Methods of Use
NUMBER OF SEQUENCES: 50
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        COMPUTER READBLE FORM:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

- FUNCTION: ACYL-PROTEIN SYNTHETASE ACTIVATES TETRADECANOIC ACID.
- IT IS A COMPONENT OF THE FATTY ACID REDUCTASE COMPLEX RESPONSIBLE FOR CONVERTING TETRADECANOIC ACID TO THE ALDEHYDE WHICH SERVES AS SUBSTRATE IN THE LUCIFERASE-CATALYZED REACTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2
